## MHIF FEATURED STUDY: **DAPA ACT HF**

**Coming soon!**

**EPIC message:** *Research MHIF Patient Referral*

<b>CONDITION:</b> Acute Heart Failure	<b>PI:</b> Mosi Bennett, MD	<b>RESEARCH CONTACT:</b> Sarah Schwager <a href="mailto:Sarah.Schwager@allina.com">Sarah.Schwager@allina.com</a>   612-863-6257	<b>SPONSOR:</b> TIMI Study Group, Brigham and Women's Hospital
--	--------------------------------	---	--

**DESCRIPTION:**

**Dapagliflozin and Effects on Cardiovascular Events in Acute Heart Failure** - evaluating in-hospital initiation of dapagliflozin in patients who have been stabilized during hospitalization for heart failure. All patients with heart failure, regardless of ejection fraction, are eligible to receive study medication for the two-month study follow-up.

**CRITERIA LIST/ QUALIFICATIONS:**

Inclusion: Acute heart failure

Exclusion:

- GFR<25
- Recent CRT, valve repair or replacement, or revascularization
- Type 1 diabetes or history of DKA

**Acute heart failure is the most common cardiovascular reason for hospital admission.**

# Stratified medicine in ischaemic heart disease

Colin Berry  
Professor of Cardiology  
December 2021

3

## Disclosures

Institutional agreements between the University of Glasgow (employer) and Abbott Vascular, AstraZeneca, Coroventis, DalCor, GSK, HeartFlow, A. Menarini Farmaceutica Internazionale, Novartis and Siemens.

Research grants from the BHF, EU and MRC

Colin Berry, 12.2021

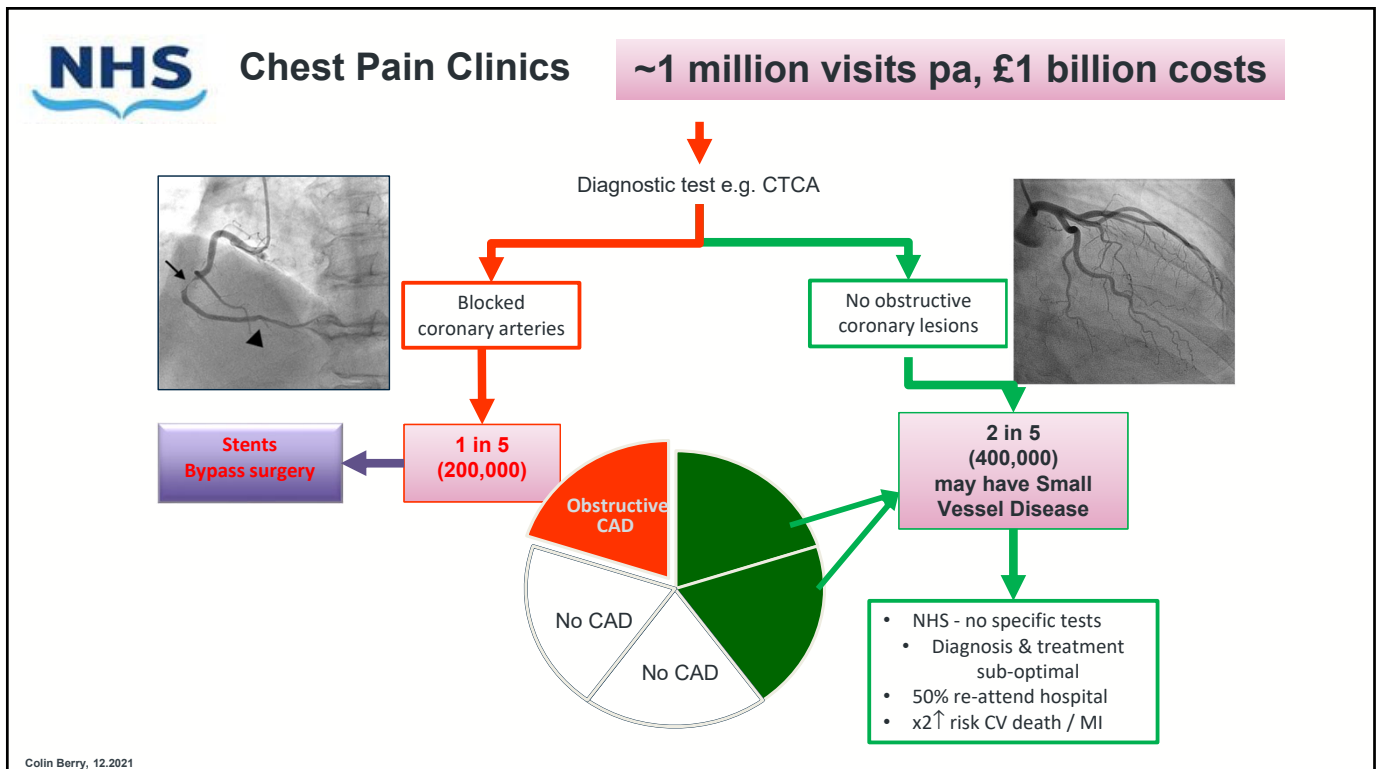

4

# Objectives

1. Create awareness on small vessel disease leading to angina.
2. Describe stratified medicine, including endotypes and linked therapy.
3. Future directions: new trials, systemic disease, sex disparities, guidelines

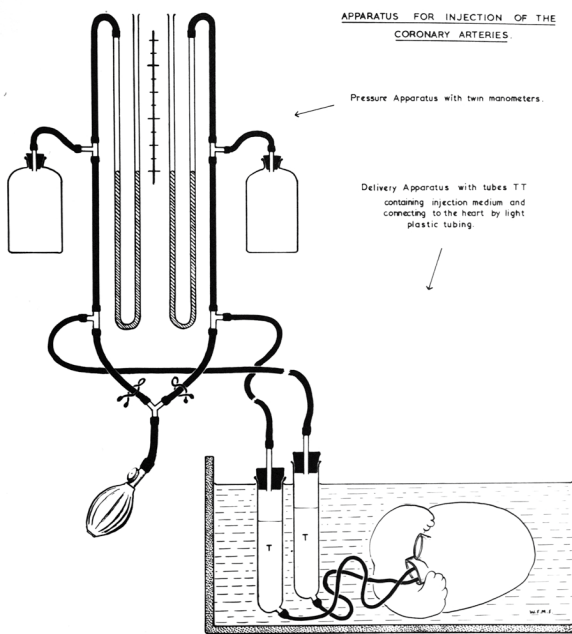

Colin Berry, 12.2021

5

6

## Intact perfused human heart

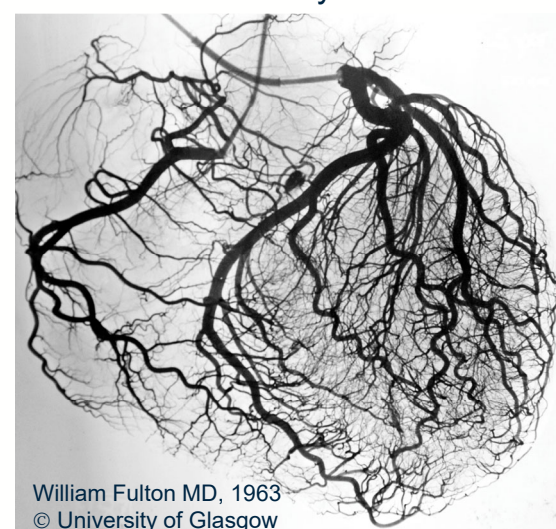

APPARATUS FOR INJECTION OF THE CORONARY ARTERIES.

Pressure Apparatus with two manometers.

Delivery Apparatus with tubes TT containing injection medium and connecting to the heart by light plastic tubing.

## ESC guidelines, Chronic Coronary Syndromes Angina without obstructive disease in the epicardial coronary arteries - INOCA

Recommendations	Class	Level
<b>Guidewire-based CFR and/or microcirculatory resistance</b> measurements should be considered in patients with persistent symptoms, but coronary arteries that are either angiographically normal or have moderate stenoses with preserved iwFR/FFR.	Ila	B
<b>Intracoronary acetylcholine</b> with ECG monitoring may be considered during angiography, if coronary arteries are either angiographically normal or have moderate stenoses with preserved iwFR/FFR, to assess microvascular vasospasm.	Ilb	B
<b>Transthoracic Doppler of the LAD, CMR, and PET</b> may be considered for non-invasive assessment of CFR.	Ilb	B

30

**CLINICAL RESEARCH**

**High-Resolution Cardiac Magnetic Resonance Imaging Techniques for the Identification of Coronary Microvascular Dysfunction**

Haseeb Rahman, PhD,<sup>1</sup> Cian M. Scannell, MBBS,<sup>2</sup> Ozan M. Demir, MSc,<sup>3</sup> Matthew Ryan, BSc,<sup>4</sup> Hannah McCoskey, MA,<sup>5</sup> Howard Ellis, BSc,<sup>6</sup> Pier Giorgio Masci, PhD,<sup>7</sup> Divaka Peetera, MD,<sup>8</sup> Amedeo Chiribiri, PhD<sup>9</sup>

**CMR**

```
graph TD; A["1. NOCAD  
2. Refractory angina"] --> B["3-Tesla CMR with Qperf"]; B --> C["MPR ≥2.2 *"]; B --> D["MPR <2.2 *"]; C --> E["Reassure,  
unlikely CMD"]; D --> F["Likely CMD"]; F --> G["ACE-inhibitor  
Statin  
Anti-Anginal Therapy"];
```

The **asterisk** indicates that an MPR value can be substituted with an MPR<sub>ENDO</sub> value of 2.41, which will have greater sensitivity at the cost of specificity. An MPR threshold of 2.19 has sensitivity and specificity values of 70% and 90%, and an MPR<sub>ENDO</sub> threshold of 2.41 has sensitivity and specificity values of 95% and 72%, respectively.

ACE = angiotensin-converting enzyme; CMD = coronary microvascular dysfunction; CMR = cardiac magnetic resonance; NOCAD = nonobstructive coronary artery disease; Q<sub>perf</sub> = quantitative perfusion; other abbreviations as in [Figure 2](#).

## Angina without obstructive disease in the epicardial coronary arteries - Microvascular angina

Recommendations	Class	Level
<b>Guidewire-based CFR and/or microcirculatory resistance</b> measurements should be considered in patients with persistent symptoms, but coronary arteries that are either angiographically normal or have moderate stenoses with preserved iwFR/FFR.	IIa	B
<b>Intracoronary acetylcholine</b> with ECG monitoring may be considered during angiography, if coronary arteries are either angiographically normal or have moderate stenoses with preserved iwFR/FFR, to assess microvascular vasospasm.	IIb	B
<b>Transthoracic Doppler of the LAD, CMR, and PET</b> may be considered for non-invasive assessment of CFR.	IIb	B

58

59

# Conclusions

1. **INOCA**: common (>obstructive CAD), under-recognition diagnosis & treatment.
2. **CorMicA trial**: *stratified medicine changes diagnosis, treatment, improves symptoms*
3. **Future directions**: educate on sex disparities, MINOCA, therapy development, and trials.
