OBJECTIVES

At the completion of this activity, the participants should be able to:

1. Appreciate the role of multi-modality imaging, including echocardiography, multi-detector computed tomography, and cardiac magnetic resonance, in the evaluation and therapeutic management of the different phenotypes of aortic stenosis (AS) including: i) Symptomatic high-gradient AS, ii) Asymptomatic high-gradient AS; ii) classical low-flow, low-gradient AS, iii) paradoxical low-flow, low-gradient AS, iv) normal-flow, low-gradient AS, and v) moderate AS with heart failure symptoms.
2. Apply an algorithm for therapeutic decision making in patients with the different phenotypes of AS.
3. Implement and interpret a new multi-parameter classification scheme for staging the extent of extra-valvular cardiac damage associated with AS.
